PROFITABLE ECOLOGY

H2Globus gives the answer to your ecological needs the most environmentally friendly, clean and profitable way

Hydrogen refueling station H2Globus

Connect water and electricity to H2Globus Station. Get an autonomous source of hydrogen for sustainable energy supply of transport, home and any other needs. All this will last more than 20 years of trouble-free service. In combination with renewable energy sources, the Station makes your transport and economy independent of hydrocarbon fuel and its communications.

H2Globus combined equipment operating on the basis of electro-chemical processes, without rubbing parts, capable of producing from 2 kg / day of hydrogen with a purity of 99.9..% at a pressure of 350 and 700 bar.

- The station can be scaled from 2 to 100 kg of hydrogen/day.
- Management and monitoring is carried out from a mobile phone using artificial intelligence.
- Optionally, the Station can provide alternative water supply with softened water, heat and power supply of buildings, as well as oxygen generation - from 17.4 to 857 kg / day

GREEN HYDROGEN: PRODUCTION, REFUELING, STORAGE AND RECONVERSION
